## DETAILED ACTION

### *Election/Restrictions*

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

Group 1, claims 1-5 are drawn to a semiconductor memory device having a plurality of memory cells, a current sense amplifier, and ***a feedback circuit to adjust a gain of the current sense amplifier depending on relative delays of data stored in different ones of the memory cells to be read*** on the current sense amplifier;

Group 2, claims 6-14 and 23 are drawn to a semiconductor memory device having a memory cell array, a plurality of data I/O pairs connected to I/O local pairs, a plurality of first current sense amplifying means for controlling gain in response to a control signal and for amplifying and outputting a current difference of each of data I/O pairs, and a current sense amplifier input impedance detecting ***and loop gain control signal generating means for detecting an input impedance of plurality of first current sense amplifying means to generate the control signal when a read command signal is applied***;

Group 3, claims 15-22 are drawn to a memory device having a plurality of cells, sense amplifying means, data I/O gates, current sense amplifier load means..., first current sense amplifying means..., a current sense amplifying input resistance detecting means..., and ***a loop control signal generating means for receiving the detecting voltage to generate the control signal when the input impedance is negative***.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
